UAF Master Plan Committee

By Gary Newman, gary@alaska.edu

April 14, 2010

The majority of the committee's work continues to be reviewing the Perkins and Will Master Plan revision. The Board of Regents have received this draft and it is anticipated to be approved with any changes during their June meeting in Dillingham.

While not ready for public release, it can be reviewed at http://fs8.fs.uaf.edu/2009MasterPlan/BOR%20Information/Working%20Draft%2001APR10/ and if any comments, provide them to me ASAP.

Over time, implementing the revised master plan could mean some substantive changes in our campus development, finance dependent of course. And considering the Legislative support we currently don't appear to have with just our highest priority of the Life Sciences Building, over time may take on a special meaning.

While MPC agendas have been getting posted regularly, I have been pressing to get meeting notes similarly updated.

quick recap of the cabinet presentation of survey results was done he presentation was given by andace rews and ris acina

he survey results clearly identified that several students would be affected and could attend the niversity if they had child care

i per h nging t tions

he initiative to have more diaper changing stations on campus was moved forward and the committee has been asked to come up with a dollar amount needed to fund this he committee discussed this to length and has created a strategy for determining the dollar amount. Ithough we would like changing stations to be universally available, we realize that budget constraints will likely tie us to just a few location. With the budget considerations the committee plans to create multiple scenarios for deployment of the the changing stations into various restrooms on campus, ealizing university deployment is unlikely our second scenario for deployment is to get changing stations on at least every campus buildings main floor restrooms, ur tertiary deployment option will be select campus locations. We will be contacting facility services to get a comprehensive list of locations that already have changing stations installed. We will then analyze the areas of highest general traffic as well as areas of likely sustained use to come up with a minimum
